Certainly! Economy sheets from moly and tungsten are now available cut to size.
594 x 631 mm? Certainly! Economy sheets from moly and tungsten are now available cut to size.

In its Webshop, Plansee offers especially attractively priced economy sheets of molybdenum and tungsten. The sheets are available in standard sizes and can now also be supplied cut to size.

Materials expert Plansee offers a wide range of semifinished products from tungsten and molybdenum at www.plansee.com/shop/. And there is a particularly wide selection of sheets: Alongside standard and premium sheets, Plansee also offers inexpensive economy sheets. These sheets share the same, familiar high standards in terms of mechanical properties, workability and material purity. The attractive price is the result of tiny surface defects, which are of no significance for applications in the field of thermal processes. For corrosion protection layers, shielding layers and applications that require additional processing of the sheet surface, it is the metallurgical, physical and chemical properties that are of far greater importance.

Molybdenum and tungsten sheets are available in different thicknesses and lengths of up to 2970 mm. The products are cut to size using state-of-the-art laser and water jet cutting technologies. This guarantees absolute precision. After they have been cut to the required size, the sheets are on their way to the customer after a maximum of 3 working days.
Certainly! Economy sheets from moly and tungsten are now available cut to size.
