Plansee is supplier of the year

On 26th January, Plansee was singled out as "Supplier of the Year" by the Warstein-based Infineon Technologies Bipolar.

Plansee has been supplying Infineon in Warstein with molybdenum semiconductor base plates for decades. In the world of power electronics, these are essential components for the production of the high-performance semiconductors used in modular or disc cell elements such as thyristors and diodes. These are used, for example, in industrial installations and wind turbines.

Plansee Vice President and Sales Director Hermann Walser: "The open, constructive and
trustful cooperation with our customers has been instrumental to us in achieving this award. In the future, we will continue to rely on continuous process improvements and product optimizations of our semiconductor base plates.”
